

Laundry Equipment &
Washer Disinfectors
for Veterinary Practices

Infection Protection

'No compromise' cleaning and disinfecting machines for veterinary practices.

Man's Best friend

Pets mean a lot to families and when they are not well we want to know that they are getting the very best treatment.

Washer disinfectors

Surgical instruments need to be processed to the same standards as those used in human surgery to ensure infection cannot be spread. Miele's washer-disinfectors offer the safest solution to vets and animal hospitals.

Machine processing offers maximum safety and is the most economical way of reprocessing surgical instruments without the risk of cross-infection. Miele washer-disinfectors offer the following advantages for machine instrument reprocessing:

- Maximum economy, lower running costs per batch than with manual cleaning and disinfecting processes.
- Hollow instruments are thoroughly cleaned using injector jets (e.g. MIS and dental instruments).
- Efficient use of personnel allowing more time for looking after patients and their owners.
- Optimum care of materials ensuring instruments do not deteriorate.
- Intensive cleaning in temperatures that do not cause denaturation.
- Safest way to process instruments and optimum preparation for reliable sterilisation.
- Minimise the risk of injury and infection for the practice team by reducing handling of contaminated instruments.
- Minimise the risk of work related injuries and infection, no skin contact with chemical disinfecting agents.
- Thorough cleaning results and consistently high levels of hygiene with time saving benefits.
- Disinfection according to EN ISO 15883

The systematic cleaning, disinfection and sterilisation of instruments in veterinary practices is a pre-requisite for protecting the health of both people and animals.

Laundry

A busy veterinary environment has constant laundry needs in the care of sick and neglected animals, so ensuring that surgery facilities are clean and safe for patients is of paramount importance.

From the cleaning of blankets, bedding and cloths, to the disinfection of surgical instruments, rigorous and controlled cleaning processes are essential in order to minimise the risk of acquiring or spreading infection. Washing these items in a simple domestic machine will not achieve the desired result; it is a specialist job that requires the right technology and wash programmes. Reliable machines are absolutely crucial when it comes to achieving consistent, high standards in the processing of laundry and Miele Professional has a worldwide reputation for the quality, reliability and longevity of its products.

Miele's range of 'Little Giants' has been specifically designed and developed by Miele for use in small businesses that may lack the space or sufficient quantities of laundry to require large commercial machines. The 5.5kg or 6.5kg load capacity machines, with a host of innovative features, create more options for the user and make these machines the ideal choice for many small commercial establishments such as veterinary surgeries. If space is at a premium these machines can be stacked together. Machine operation is simple thanks to Miele's multifunction selector. A selection of programmes designed specifically for veterinary practices are presented in the large graphic display, together with other useful information such as programme duration which is calculated at the start of a cycle.

Miele recommend either the G7831 or G7882 washer disinfectors.

G7831

- Freestanding or built-under.
- Only 45 cm wide.
- 5 cleaning and disinfecting programmes.
- Single phase electrical connection.
- Load capacity – 1 DIN mesh tray or 4 small mesh trays (E146).

G7882

- Freestanding or built-under.
- 60 cm wide.
- 10 cleaning and disinfecting programmes.
- Three-phase electrical connection.
- Integrated liquid dispenser pump.
- Load capacity – 4 DIN trays.
- Also available with integrated hot air drying.

Benefits of Miele Professional Laundry products:

- Having an on premise laundry is the most cost effective and easy to manage way of laundering your items to prevent cross infection.
- Miele machines have low energy and water usage. The Little Giant range is rated A+AA.
- All machines include specialist programmes for veterinary practices.
- The patented Honeycomb drum provides gentle laundry care – increasing the lifespan of your items.
- Easy to use controls.
- Miele machines are subject to a thorough testing procedure – Little Giants are tested for at least 30,000 hours.

Little Giants

8kg machines

Large capacity laundry

Miele Professional manufacture a range of laundry machines from 5.5kg to 32kg capacity so there is always a product suitable for any size of business.

All washing machines of 6kg capacity and over feature a sluice and thermal disinfection wash programme and adhere to all WRAS category 5 regulations which provide you with control and peace of mind over possible cross infection.

Miele Cat and Dog Vacuum Cleaners

Ideal for cat and dog owners

Miele Cat & Dog vacuum cleaners are designed for pet owners who love their animals but dislike the hairs they shed.

Specially designed Floorheads collect even the most stubborn hair from upholstery and carpets, while the Active Air Clean filter will absorb and eliminate any unwanted odours leaving your home clean and fresh.

Miele Professional laundry and instrument washers give legendary performance. With programmes specially designed for vet's surgeries, they provide reliable thermal disinfection on both instruments and workwear. They're engineered to perform for years to come, meaning less downtime, longer replacement intervals and ultimately less cost.
